Personal Assistance for Seniors Who Are Self-Reliant

Team ID	PNT2022TMID18885
Project Name	Project - Personal Assistance for Seniors Who Are Self-Reliant

1. INTRODUCTION

1.1 Project Overview

Sometimes elderly people forget to take their medicine at the correct time. They also forget which medicine He / She should take at that time. And it is difficult for doctors/caretakers to monitor the patients around the clock. To avoid this problem, this medicine reminder system is developed. An app is built for the user (caretaker) which enables him to set the desired time and medicine. These details will be stored in the IBM Cloudant DB. If the medicine time arrives the web application will send the medicine name to the IoT Device through the IBM IoT platform. The device will receive the medicine name and notify the user with voice commands.

1.2 Purpose

- To cater to the needs of the elderly lacking physical assistance during their course of medication.
- To provide better quality of life for individuals with chronic disabilities and their caregivers.
- Improved ability to stay self-sufficient at home.

2. LITERATURE SURVEY

2.1 Existing Problem

The existing methodologies include various gadgets available to assist patients in taking their medication either by simplifying administration or by assisting them in remembering to do so. Pill reminder charts, drug diaries, calendar clocks, telephone prompting service, multi compartment compliance aids (MCAs), talking labels, voice reminders, watch reminders, daily pill boxes, and automated pill dispensers are just a few examples.

2.3 Problem Statement Definition

Elderly patients will try to intake medicine on prescribed time but fail to intake medicine on prescribed time because there is no caregiver to remind, which makes them feel insecure about their health.

3. IDEATION & PROPOSED SOLUTION

3.1 Empathy Map Canvas

3.2 Ideation & Brainstorming

- MEDICINE REMINDER** Sometimes elderly people forget to take their medicine at the correct time. They also forget which medicine He / She should take at that particular time. And it is difficult for doctors/caretakers to monitor the patients around the clock. To avoid this problem, this medicine reminder system is developed. An app is built for the user (caretaker) which enables him to set the desired time and medicine. These details will be stored in the database. If the medicine time arrives the web application will send the medicine name to the IoT Device through the IoT platform. The device will receive the medicine name and notify the user with voice commands.
- HEALTH MONITORING APPLICATION** At least 80% of seniors suffer from one chronic condition; 68% suffer from two or more. Smart devices—i.e., blood pressure monitors, glucose meters, oximeters, and pill dispensers—can help the elderly manage these conditions. Caregivers obtain data from various devices connected to the cloud, analyze and assess everyday life patterns of senior patients, and detect health problems before they escalate. If any deviation is suspected, a healthcare worker will be automatically notified.

- **PERSONAL ASSISTANT DEVICE** When the elderly wears the device, the pulse sensor present in the device measures the pulse rate, later these readings and the data from different sensors are sent to the microcontroller. These measured values are sent to the doctor's application, and the caretaker can check the readings frequently. If the patient does not know how to use the mobile, then the device has some push buttons just by pressing them the alert is sent to the doctor or caretaker's mobile application.

3.3 Proposed Solution

An app is built for the user (caretaker) which enables him to set the desired time and medicine. These details will be stored in the IBM Cloudant DB. If the medicine time arrives the web application will send the medicine name to the IoT Device through the IBM IoT platform. The device will receive the medicine name and notify the user with voice commands.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Sometimes elderly people forget to take their medicine at the correct time. They also forget which medicine He / She should take at that particular time. And it is difficult for doctors/caretakers to monitor the patients around the clock.
2.	Idea / Solution description	The medicine reminder system is developed. An app is built for the user (caretaker) which enables him to set the desired time and medicine. These details will be stored in the database. If the medicine time arrives the web application will send the medicine name to the IoT Device through the IoT platform. The device will receive the medicine name and notify the user with voice commands.
3.	Novelty / Uniqueness	Reminds the seniors to take the right medicine at the correct time, portable and easier for the caretakers to monitor them
4.	Social Impact / Customer Satisfaction	Easier for the caretakers to monitor them and

		help the seniors to take the right medicine.
5.	Business Model (Revenue Model)	Can be sold as a subscription service.
6.	Scalability of the Solution	Since it is a web application, anyone may readily access this subscription service; all they need to do is download it and continue.

3.3 Problem Solution Fit

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) Who is your customer? i.e. working parents of 0-5 y.o. Kids CS <ul style="list-style-type: none"> Seniors who are self-reliant and their caretakers 	6. CUSTOMER CONSTRAINTS What constraints prevent your customers from taking action or limit their choices of solutions? i.e. spending power, budget, no cash, network connection, available devices. CC <ul style="list-style-type: none"> Network connection 	5. AVAILABLE SOLUTIONS Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? i.e. pen and paper is an alternative to digital notetaking. AS <ul style="list-style-type: none"> Caretakers can monitor them and can have medicine reminding timetable that they can refer. PROS: Easier for the caretakers to monitor them & help them to take their medicines regularly and it is portable. CONS: Needs constant internet connection and needs to store the correct medicine name and timing in the database, if in case wrongly stored or missed storing of some medicines or the timing of doses is incorrect, it can cause medical complications. 	Explore AS, differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one; explore different sides. J&P <ul style="list-style-type: none"> Sometimes elderly people forget to take their medicine at the correct time. They also forget which medicine He / She should take at the particular time. And it is difficult for doctors/caretakers to monitor the patients around the clock. 	9. PROBLEM ROOT CAUSE What is the real reason that this problem exists? What is the back story behind the need to do this job? i.e. customers have to do it because of the change in regulations. RC <ul style="list-style-type: none"> Customers have to do it because they often forget to take the proper medicines in the proper proportion at the proper time. And it is difficult for doctors/caretakers to monitor them around the clock since it is not possible for them to remind them of their medicine's dosage every time. 	7. BEHAVIOUR What does your customer do to address the problem and get the job done? i.e. directly related: find the right solar panel installer; calculate usage and benefits; indirectly associated: customers spend free time on volunteering work (i.e. Greenpeace) BE <ul style="list-style-type: none"> One can use the web application and the IoT device The caretaker can set the medicine and time 	
	3. TRIGGERS What triggers customers to act? i.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news. TR <ul style="list-style-type: none"> Takes stress out of remembering medicine Prevents life threatening mistakes Easy to monitor 	10. YOUR SOLUTION If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality. SL If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour.	8. CHANNELS OF BEHAVIOUR 8.1 ONLINE What kind of actions do customers take online? Extract online channels from #7 <ul style="list-style-type: none"> Can set the medicine and time 8.2 OFFLINE What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development. <ul style="list-style-type: none"> Try to connect to internet 	
	4. EMOTIONS: BEFORE / AFTER How do customers feel when they face a problem or a job and afterwards? i.e. lost, insecure > confident, in control - use it in your communication strategy & design. EM <ul style="list-style-type: none"> Stressed > Stress relieved Should recall the medicines > Can fail to remember the medicines Irregular with his/her dose > Regular with his/her dose Wrong medicine at particular time > Right medicines at particular time 			

4. REQUIREMENT ANALYSIS

4.1 Functional Requirements

FR No.	Functional Requirement	Sub Requirement (Story / Sub-Task)
--------	------------------------	------------------------------------

	(Epic)	
FR-1	Authenticate user	User verification using username and password
FR-2	Time and medicine setting	Setting the details of medicine and time
FR-3	Storing the data in Cloudant DB	Stores the details of the medicine such as doses of medicine and time details in Cloudant DB
FR-4	Sending information or data	Web application send the medicine name to IoT device through IoT Platform
FR-5	Giving Notification	The IoT device receives the medicine name and notify the user using voice commands

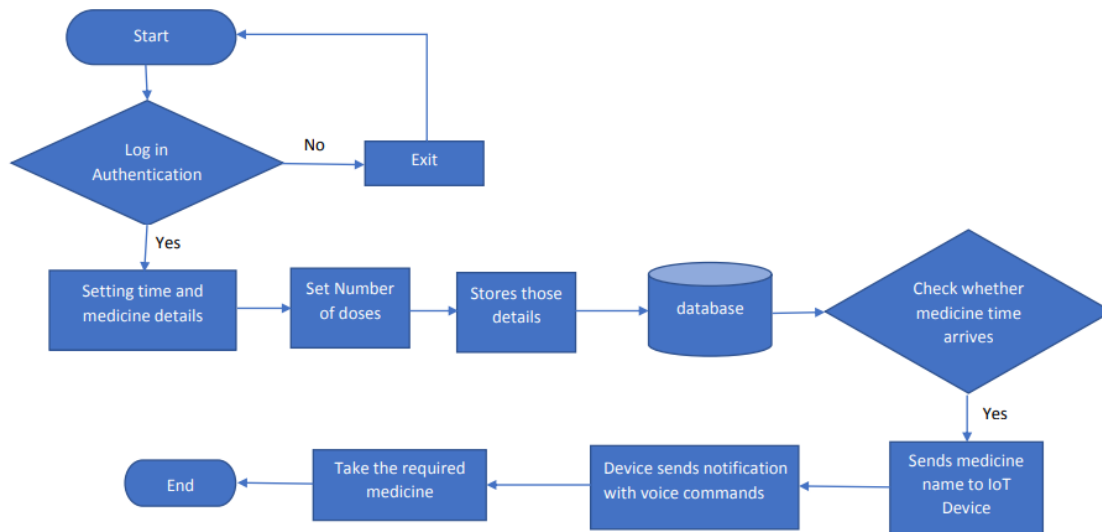

4.2 Non-Functional Requirements

14.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The System should provide a systematic, simple and user-friendly interfaces.
NFR-2	Security	The system must ensure all information of the registered end users are secured and not accessible by other party.
NFR-3	Reliability	The system should have lower risk of errors and process failures that can cause patients harm.
NFR-4	Performance	To perform good speed, reliability and capacity of the system is needed.
NFR-5	Availability	The system should be available if there are any changes to functionalities of the system in future.
NFR-6	Scalability	The system is scalable to increase or decrease in performance according to requirements

5. Problem Solution Fit

5.1 Data Flow Diagrams

5.2 Solution & Technical Architecture

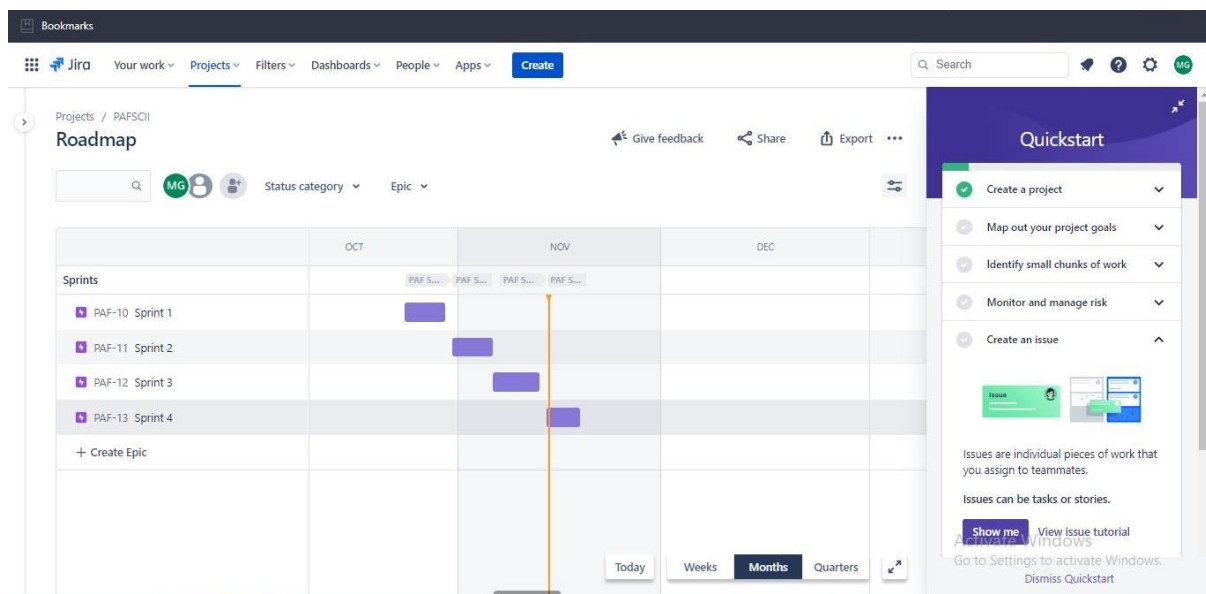

5.3 User Stories

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Citizen)	Scheduling	USN-1	As a user, I want to take Medicines on time and monitor my health.	I want to take medicines on time	High	Sprint-1
Customer (Patient)	Smart medicine box	USN-2	As a user, I want to take my tablets on time by voice command.	I want to take my tablets on time by voice command	High	Sprint-1
Customer (Doctor)	Smart medicine box	USN-3	As a user, my patient needs to take medicines on time and monitoring the activity.	My patient needs to take medicines on time	Low	Sprint-2
Customer (CareTaker)	Data storage	USN-4	As a user, my patient needs medication time and prescription should load in the database for the upcoming week.	My patient medication time and prescription should be in database list	Medium	Sprint-3
Customer (CareTaker)	Smart medicine box	USN-5	As a user, I need to take my medicine in nearby places with light notification.	I want to access the customer health 24/7	High	Sprint-4
Customer (Patient)	User Experience	USN-6	As a user,the app should be easy and simple to use	I want an easy to handle application	Medium	Sprint-4

6. PROJECT PLANNING & SCHEDULING

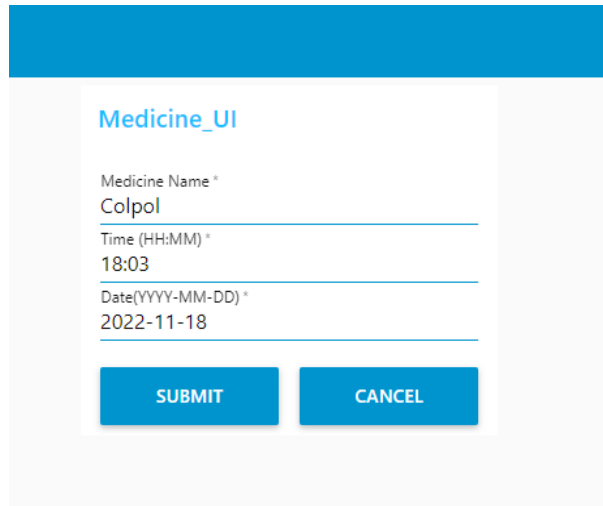

6.1 Sprint Planning & Estimation

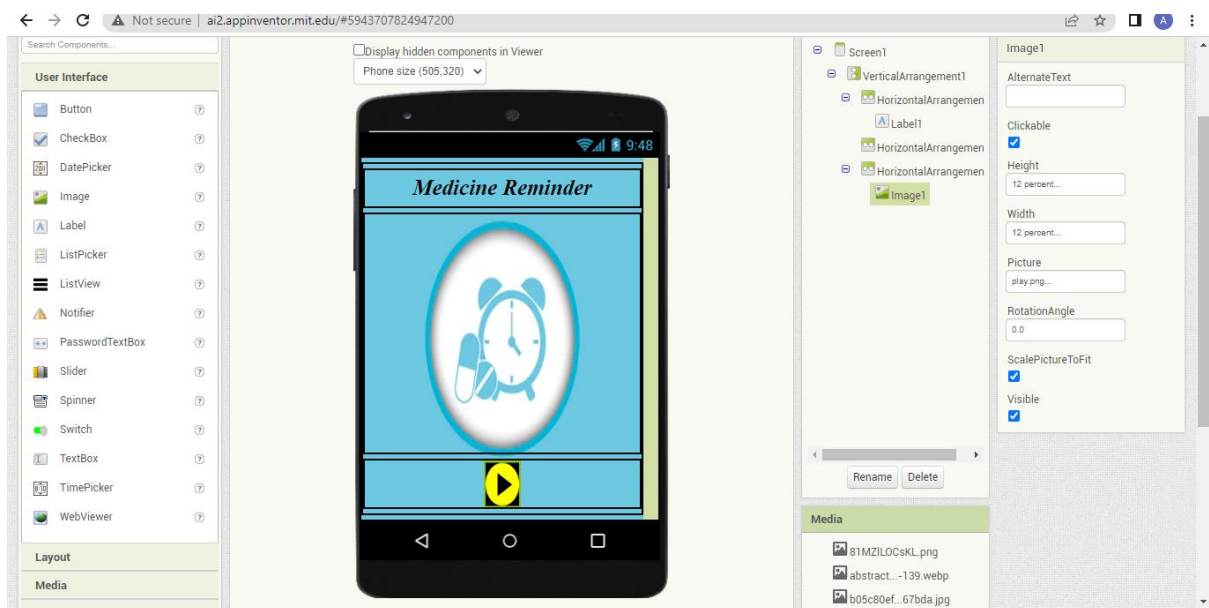

7. CODING & SOLUTIONING

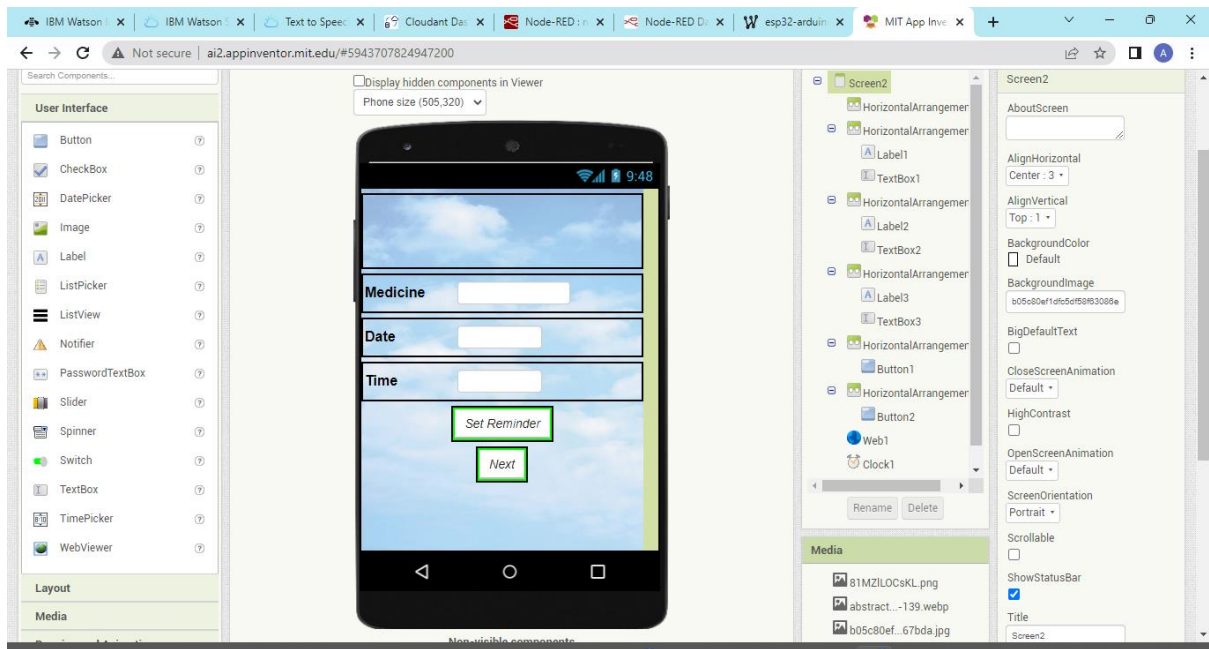

Features

#1 Web UI to schedule medicine name and intake time:

The image shows a web form titled "Medicine_UI" with a blue header bar. The form contains three input fields: "Medicine Name *" with the value "Colpol", "Time (HH:MM) *" with the value "18:03", and "Date(YYYY-MM-DD) *" with the value "2022-11-18". Below the input fields are two blue buttons labeled "SUBMIT" and "CANCEL".

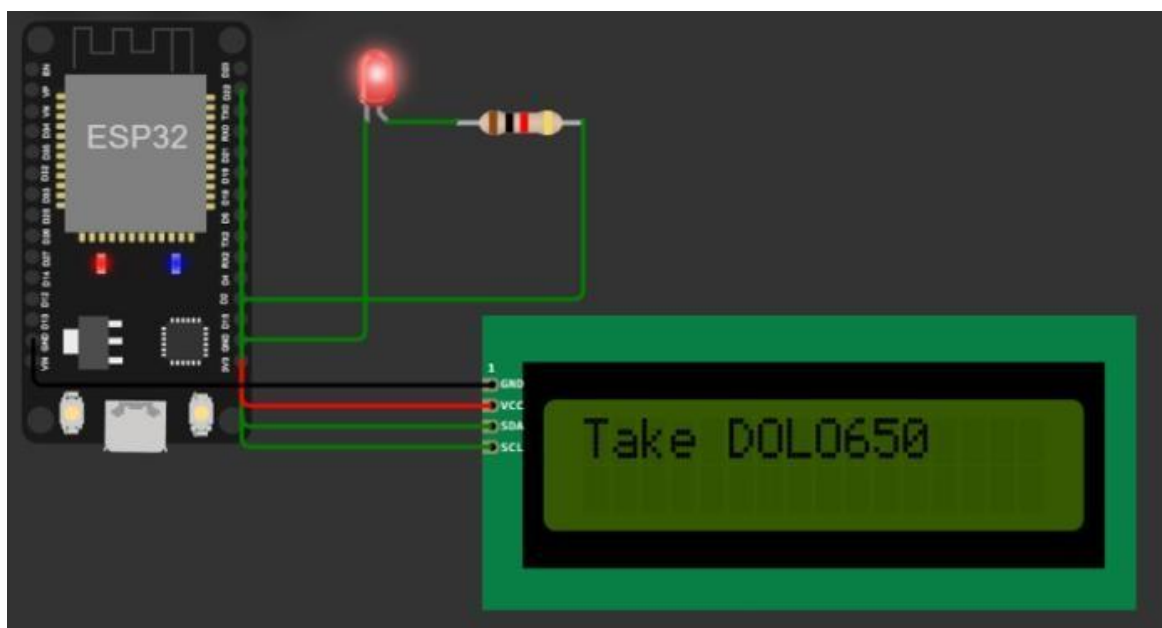

#2 Sending the medicine name as Voice output at the scheduled time

#3 Displaying the medicine name on the IoT device at the scheduled time

H	I	J	K	L	M	N
Expected Result	Actual Result	Status	Comments	TC for Automation(Y/N)	BUG ID	Executed By
Able to access the URL	failed to access in mobile	Fail	Wrong Browser selected	NO	101	Bhavani R K
Now User able to access the URL	Able to access in mobile	Pass	Able to access in Chrome and Edge	YES		Akshayasri S
enter a data in specified format only	specified input is not received	Fail	Specify the User formats	NO	110	Kawin M
User can enter the data in specified format now	Input received properly	Pass	Format specified	YES		Anne Angelina J
User inputs has to be stored in cloud	Failed to storing the inputs	Fail	Cloud not connected properly	YES	111	Kawin M
User inputs has to be stored in cloud	Inputs are stored in the cloud	Pass	Cloud connected properly	YES		Akshayasri S
Gives True when both times match	Null	Fail	Check the input	YES	113	Anne Angelina J
Gives True when both times match	TRUE	Fail	verified	Yes		Bhavani R K
Voice notifications	Voice notifications service didn't work	Fail	In program, commands are as object instead of string	NO	121	Akshayasri S
Voice notifications	Voice notifications arrived	Pass	New string functions were added	YES		Kawin M

8.2 User Acceptance Testing (UAT):

Purpose of the document:

The purpose of this document is to briefly explain the test coverage and open issues of the Personal assistance for seniors who are Self-Reliant project at the time of the release to User Acceptance Testing (UAT).

Defect Analysis:

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	5	3	1	2	11
Duplicate	2	1	0	0	3
External	2	2	0	0	4
Fixed	10	2	3	15	30
Not Reproduced	0	1	0	0	1
Skipped	0	0	2	0	2
Won't Fix	0	2	4	5	11
Totals	19	10	8	22	62

Test Case Analysis:

This report shows the number of test cases that have passed, failed, and untested.

Section	Total Cases	Not Tested	Fail	Pass
Print Engine	5	0	0	5
Client Application	42	0	0	43
Security	1	0	0	1
Outsource Shipping	0	0	0	0
Exception Reporting	2	0	0	2
Final Report Output	6	0	0	6
Version Control	1	0	0	1

NFT - Detailed				
S.No	Project Overview	NFT Test approach	Assumptions/Dependencies/Risks	Approvals/SignOff
1	Personal Assistance For Seniors who are Self-	LOAD	Dependencies	SignOff

10. ADVANTAGES & DISADVANTAGES

Advantages:

- Helpful for people who have no caretakers and helps people to take medicines on time by voice command.

Disadvantages:

- Elderly people should be aware of how to use the application.
- There is no way to determine what actually happened as it only gives the remainder to take the medicine.
- Internet connection is required.

11. Conclusion

Our project's goal is to see how successful an automated pilldispenser will be in assisting individuals in better self-managing theirmedications. This might be demonstrated by the following:

- Better quality of life for individuals with chronic disabilities and their caregivers.
- Improved ability to stay self-sufficient at home.
- Social impact on the pharma sector.
- Less dependency on health-care and social-services.

The device is intended for those with memory impairments, and several of the medical diagnoses recorded for trial participants,including Alzheimer's and dementia, the elderly and persons with

long-term medical conditions who must take many prescriptions every day, backed up this claim.

In conclusion, we used technology to have a social effect in the pharmaceutical industry.

12.Future scope:

- We will further extend the app where the prescriptions of the patients will be directly uploaded to the database.

- When your medicine runs low, we will reach out to third parties so you can get it delivered at your door.
- Touch sensors can be incorporated on each compartment to track the number of times the compartment has been opened so that refill time can be calculated.
